Incident Classification

Effective Date:	2099-04-01	**Policy Number:**	99 TST 2030
Applicability/Class:	Synthetic Policy	**Department:**	Incident Response
Date of Review:	2099-09-15	**Approval:**	Synthetic Approval Authority 6

I. Purpose and Scope

Incident Classification Policy governs classification of operational, security, access, and records incidents for Incident Response and authorized supporting roles.

The required control is to assign type and provisional severity from observed impact. This document does not authorize activity outside its stated scope.

Control identifier CTL-016 distinguishes this requirement from similar controls in related documents.

II. Definitions and Responsibilities

Accountable Owner means the role responsible for the incident classification and the final disposition of its open actions.

Complete Evidence means evidence sufficient to demonstrate known impact, affected assets, duration, and control status.

The originating operator supplies facts; the Incident Response reviewer verifies scope, authority, and conflicts.

Related terms may also appear in 99 TST 2006 and 99 TST 2031, but each document retains its own decision boundary.

III. Required Controls

1. Create the incident classification. 2. Identify the accountable owner. 3. Record the governing purpose and affected scope.

4. Verify known impact, affected assets, duration, and control status. 5. Record exceptions and their expiration. 6. Preserve evidence of the decision.

A control is incomplete when its owner, time boundary, authoritative reference, or required evidence is missing.

The reviewer must distinguish this control from the related but non-equivalent requirements in TST-9030.

IV. Procedure and Exceptions

1. Intake the request or event. 2. Validate identity and applicability. 3. Apply CTL-016. 4. Record the outcome.

If facts are ambiguous, request the missing operational fact instead of guessing a department, incident type, or authority.

An exception is time bounded, identifies compensating controls, and links to both 99 TST 2006 and 99 TST 2031 when applicable.

Urgency does not remove evidence, logging, notification, or later review requirements.

V. Records, References, and Review

The authoritative output is the incident classification; preserve its identifier, owner, timestamps, evidence, approval, and disposition.
