Remote Access

Effective Date:	2099-09-01	**Policy Number:**	99 TST 2041
Applicability/Class:	Synthetic Policy	**Dept.:**	Cybersecurity
Date of Review:	2099-02-15	**Approval:**	Synthetic Approval Authority 1

I. Purpose and Scope

Remote Access Policy governs remote connection to organizational systems for Cybersecurity and authorized supporting roles.

The required control is to require approved identity, managed endpoints, and monitored sessions. This document does not authorize activity outside its stated scope.

Control identifier CTL-021 distinguishes this requirement from similar controls in related documents.

II. Definitions and Responsibilities

Accountable Owner means the role responsible for the remote access authorization and the final disposition of its open actions.

Complete Evidence means evidence sufficient to demonstrate current need, device compliance, and strong authentication.

The originating operator supplies facts; the Cybersecurity reviewer verifies scope, authority, and conflicts.

Related terms may also appear in 99 TST 2040 and TST-9040, but each document retains its own decision boundary.

III. Required Controls

1. Create the remote access authorization. 2. Identify the accountable owner. 3. Record the governing purpose and affected scope.

4. Verify current need, device compliance, and strong authentication. 5. Record exceptions and their expiration. 6. Preserve evidence of the decision.

A control is incomplete when its owner, time boundary, authoritative reference, or required evidence is missing.

The reviewer must distinguish this control from the related but non-equivalent requirements in 99 TST 2053.

IV. Procedure and Exceptions

1. Intake the request or event. 2. Validate identity and applicability. 3. Apply CTL-021. 4. Record the outcome.

If facts are ambiguous, request the missing operational fact instead of guessing a department, incident type, or authority.

An exception is time bounded, identifies compensating controls, and links to both 99 TST 2040 and TST-9040 when applicable.

Urgency does not remove evidence, logging, notification, or later review requirements.

V. Records, References, and Review

The authoritative output is the remote access authorization; preserve its identifier, owner, timestamps, evidence, approval, and disposition.

References: 99 TST 2040; TST-9040; 99 TST 2053.

Review this document on 2099-02-15 or after a material control failure, whichever occurs first.

Corrections append a new traceable version and never silently overwrite prior provenance.
