Security Event Reporting

Effective Date:	2099-12-01	**Policy Number:**	99 TST 2043
Applicability/Class:	Synthetic Procedure	**Dept.:**	Cybersecurity
Date of Review:	2099-05-15	**Approval:**	Synthetic Approval Authority 4

I. Purpose and Scope

Security Event Reporting Procedure governs suspected misuse, device loss, credential exposure, or unsafe access for Cybersecurity and authorized supporting roles.

The required control is to preserve evidence and route the event for classification. This document does not authorize activity outside its stated scope.

Control identifier CTL-024 distinguishes this requirement from similar controls in related documents.

II. Definitions and Responsibilities

Accountable Owner means the role responsible for the security event report and the final disposition of its open actions.

Complete Evidence means evidence sufficient to demonstrate timely notice with affected identity, device, data, and activity.

The originating operator supplies facts; the Cybersecurity reviewer verifies scope, authority, and conflicts.

Related terms may also appear in 99 TST 2030 and 99 TST 2031, but each document retains its own decision boundary.

III. Required Controls

1. Create the security event report. 2. Identify the accountable owner. 3. Record the governing purpose and affected scope.

4. Verify timely notice with affected identity, device, data, and activity. 5. Record exceptions and their expiration. 6. Preserve evidence of the decision.

A control is incomplete when its owner, time boundary, authoritative reference, or required evidence is missing.

The reviewer must distinguish this control from the related but non-equivalent requirements in TST-9030.

IV. Procedure and Exceptions

1. Intake the request or event. 2. Validate identity and applicability. 3. Apply CTL-024. 4. Record the outcome.

If facts are ambiguous, request the missing operational fact instead of guessing a department, incident type, or authority.

An exception is time bounded, identifies compensating controls, and links to both 99 TST 2030 and 99 TST 2031 when applicable.

Urgency does not remove evidence, logging, notification, or later review requirements.

V. Records, References, and Review

The authoritative output is the security event report; preserve its identifier, owner, timestamps, evidence, approval, and disposition.

References: 99 TST 2030; 99 TST 2031; TST-9030.

Review this document on 2099-05-15 or after a material control failure, whichever occurs first.

Corrections append a new traceable version and never silently overwrite prior provenance.
